Macalindong, Wrain R.   202217043

BSIT – 3A

What did you learn from this activity?

What I learn in this activity is the application of Human-Computer Interaction (HCI) in making the website. Making a website is not an easy task, but with the use of HCI, it is manageable. I learned the importance of having a plan of how the web would work, and the use of prototype is extremely important especially in responsiveness and before the deployment of the portfolio to easily improve and change how things works in the portfolio. I also learned to use the usability heuristics like maintaining consistency of designs in all pages, not adding unnecessary elements and keeping it simple and minimalist, and adding a design which the user can recognized that that element is clickable.

In conclusion, this activity helps me to understand the importance of HCI when designing a website. It helps not only the developer to develop a better website, but also the user to be able to use it with only minimal to no problem. This activity encouraged me to use HCI more effectively in all of my future projects.
